

**Avery Dennison®**

## **TrafficJet™ Xpress Pressure Roller Position**

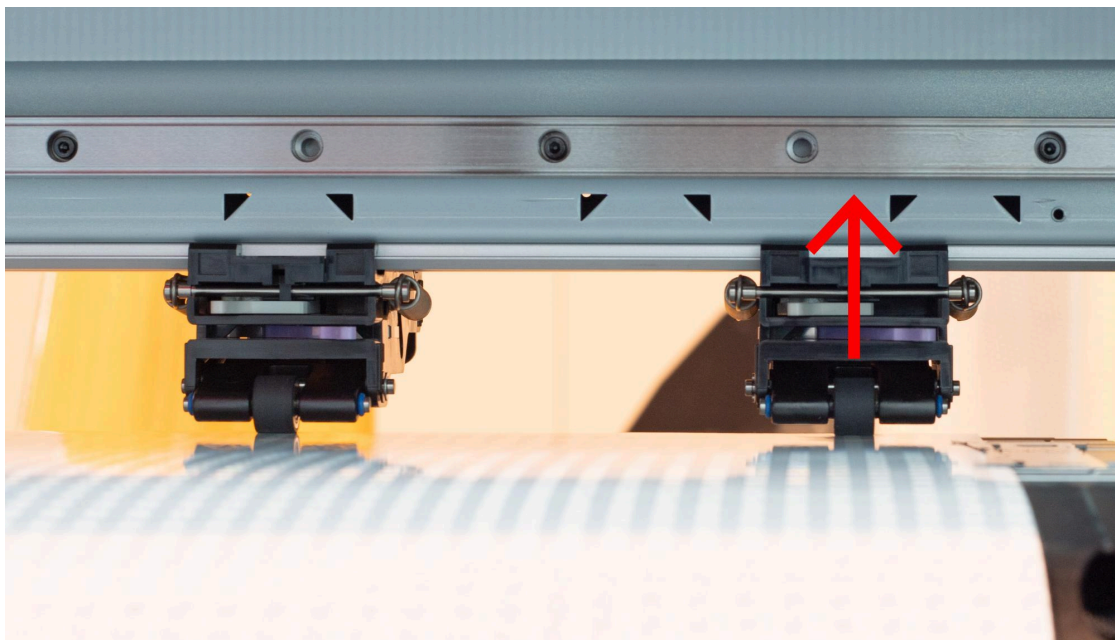

Instructional Bulletin : # 9.97

Revision : # 01

Last Updated : July 2025

Correct Pressure Roller position

Wrong Pressure Roller position

- Place the pressure roller in the correct position (**green arrow**), between the marks as can be seen in the picture.
- Leave a small space between the roller and the edge of the media.
- Center the media vs. the pressure rollers.
- Place the edge guards over the edge of the media.
- Lower the pressure lever.
- Make sure the amount of pressure rollers used (minimum 6, preferably 7 for reflective sheeting) match with what is displayed on the front panel display and correct if needed.

## Warning!

- The risks of placing the pinch rollers in the wrong position (**red arrow**) vs. the edge of the sheeting are media tracking issues (zig-zagging), a head strike or head crash which can damage the head(s) beyond repair. This is not covered under warranty.
- Unfortunately the printer does not give an error when the pinch roller is misaligned, so do a visual check from time to time.
